*Celebrating Over 30 Years*

## A New Name for Towing Power

/Press Release/ - Kent, WA, December 15, 2008 – Torklift International, a leading provider of hitches and RV accessories for avid outdoors enthusiasts for over 33 years, is pleased to announce brand new for 2008 the SuperHitch Magnum, now available for immediate shipment worldwide.

“We designed and manufactured the new SuperHitch Magnum to provide a class of receiver hitch and ball mount accessories beyond all other towing platforms- we call the new SuperHitch Magnum a class V-plus!” says co-owner and vice president Jack Kay.

The new 2008 Magnum hitch (specs and image available at [www.torklift.com](http://www.torklift.com)) has a 20,000 lb. capacity, exceeding its “SuperHitch” predecessor by 3,000 lbs and setting a new industry record for greatest tow weight capacity. The SuperHitch Magnum is compatible with Ford, Dodge, and Chevy for ¾ ton and up applications, including the 1-½ ton 450-series trucks. It is the only hitch available today (other than the original SuperHitch) to offer the convenience of “as-is” installation; that is to say the hitch can be installed without any additional holes made in the frame for all newer models and most older models. The SuperHitch Magnum is compatible with all industry standard ballmounts with its 2-½ upper receiver and 2” lower receiver.

The Magnum isn’t replacing the original 17K Super Hitch any time soon and instead establishes a class of its own. The Magnum will be made in the USA like other Torklift products and should be available anywhere in the US or Canada within 48 hours of ordering. Prices start at \$599.99.
